## Waste Management at the Institute of Home Science

At the Institute of Home Science, we are committed to maintaining a clean and sustainable environment by efficiently managing both degradable and non-degradable waste generated across various facilities. Waste is systematically collected from classrooms, the library, washrooms, four specialized laboratories, offices, the day-care center, and the cabins of both teaching and non-teaching staff.

Sweeper teams are responsible for the daily collection of waste, ensuring segregation at source. Degradable waste is separated for composting, while non-degradable waste is carefully sorted for recycling or disposed of through authorized channels. This method ensures minimal environmental impact and promotes cleanliness throughout the campus.

The following images showcase the waste collection process, where our dedicated staff actively participate in maintaining hygiene and sustainability at the Institute.
